

Ground-breaking Touchscreen with Unmatched Power for More Time Teaching, Less Time Training

San Diego, January 2023

OneScreen L7 Touchscreen Series, including HL7 and TL7, has just debuted with some of the most advanced specs on the market today. L7 represents a huge advance in classroom technology that adapts to a teacher's natural work flow. Teachers describe it as "a familiar home base with the power to transport students to exciting worlds."

Amid massive shifts in expectations on teachers and how learning is delivered, a new technology has arrived with answers for both. OneScreen L7 is garnering praise as the touchscreen that adapts to the needs of teachers and their comfort level with EdTech. With far faster operations plus quick access to established teaching tools, L7 drops easily into any educator's class flow to allow them to spend more time teaching and less time training.

The L7 hosts a spate of recent advances, such as Android 11 OS, 8GB of RAM and 64GB of storage with a zero bonded touch response system. That gives the L7 the limitless versatility of the latest mobile device in a large scale format for the whole class to share. Teachers can just walk up and teach, pulling in their preferred learning apps, teaching videos, vetted lesson plans and just about anything they need to energize students.

Along with the new hardware comes two new educational software applications that have been highly anticipated. QuizWiz is an AI-based quiz generator that creates ready-to-use tests from any content. LearningHub is a platform for lesson capture, engagement tracking, remote learning and supports LMS integration.

The response has been just wonderful. Teachers are able to master the essential teaching tools in a few minutes, bringing in all of their saved files with a single sign-on and launching their favorite online tools.

Regional Sales Manager

“Teachers keep telling me, ‘It just fits in my flow,’” said Regional Sales Manager Robyn McGregor. “The response has been just wonderful. Teachers are able to master the essential teaching tools in a few minutes, bringing in all of their saved files with a single sign-on and launching their favorite online tools.”

OneScreen CEO Sufian Munir explained where L7 designers got their inspiration.

“ We simply listened. IT staff and instructional designers at schools around the world told us that teachers do not have the time for a lot of training. They need EdTech with simplicity, speed and the flexibility to bring in whatever tools they already use. Challenge accepted. You can see our engineers went above and beyond.

Few other interactive whiteboards on the market today can match the specs of the L7. Yet other manufacturers tend to charge significantly more and require closed systems. OneScreen went the opposite way, building a user-friendly open ecosystem that fits within strict school budgets.

“We took what worked in earlier iterations, the favorite aspects defined by both teachers and students, and then we dialed it up,” said Kelly Bolton, VP of Brand and Marketing.

“ The L7 helps to add more flow and less friction to a teacher’s life in the classroom at a time when they need it most.

The L7 is backed by OneScreen’s signature service, the

Screen Skills Gurus. Customers in 52 countries depend on highly trained Gurus for free, unlimited help and training when they need it.

All OneScreen customers can get in touch with an engineer, not customer service agents, to resolve issues in real time or maximize productivity. Gurus are now easier to reach in user-friendly apps for desktop or mobile devices.
