

Smart Cities Security Watch: New AI Cameras and Alert Systems Debut at ISC West 2022

San Diego, March 2022

ISC West 2022 will introduce innovations such as AI-enhanced security cameras, a real-time alert and location service for schools/enterprise, plus an app capable of delivering tech help on-demand – all from OneScreen. This new line of business expands on the OneScreen promise to streamline communications.

The 2022 International Security Conference in Las Vegas (ISC West), running March 22 - 25, marks the return of the largest security trade show in the US. In the past, this is the show that introduced many of the most influential technologies in the industry, featuring advanced applications of robotics, drones, AI and master control units for smart cities.

This year, ISC West will see touchscreen manufacturer OneScreen debut a new line of business dedicated to physical security, with a focus on education, healthcare and the public sector. This exhibit will highlight an array of OneScreen Security Cameras, including AI-enhanced models made with Qualcomm Technologies.

A second big draw at the event will be OneScreen MeerkatSafe, a real-time alert and location service built especially for covering business facilities and K-12 schools. Both are supported by a new app that immediately connects to OneScreen Screen Skills Gurus for unlimited help and training.

“ Every second counts in an emergency. Every detail matters. We’ve built these cameras and alert services as part of our wider mission to knock down barriers to communication.

~ Sufian Munir
CEO, OneScreen

”

OneScreen CEO Sufian Munir observed, "Every second counts in an emergency. Every detail matters. We've built these cameras and alert services as part of our wider mission to knock down barriers to communication. When you need to know, you simply must have technology you can rely on. The OneScreen name stands for meeting the highest quality standard, planning for what's next and creating a safe space for the entire team."

Those sentiments were echoed by Kevin Wong, National VP of Sales at OneScreen, "The best technologies are the ones you don't see because they are so essential to your daily life and well-being. OneScreen has been moving out ahead of the curve in turning the possible into the practical, as you can see in our new AI-enhanced Security Cameras."

The second big announcement at ISC West is OneScreen MeerKatSafe, a response to a need for fast, accurate communications during emergencies, directing responders exactly to the spot where they are needed most. "When someone needs help, MeerKatSafe is the best way to make a precision call for help - right now, from wherever you are," explained Kevin Talentino, CEO of OneScreen's distributor partner VTI. "This real-time alert and notification system directs responders to the right place in time to make a real difference. We can all feel good about that."

Both are fully supported in the new Screen Skills Gurus app,

the OneScreen exclusive service that assures free, unlimited tech help and training, 24 hours a day, 5 days per week. The Screen Skills Gurus app will debut at ISC West, giving customers and integrators a first look at this direct channel to tips, training and troubleshooting via video, audio or real-time chat.

Full details on these innovations will be unveiled on the OneScreen website March 22, 2022, in coordination with the ISC West exhibit.
